1. (Cancelled)
2. (Currently Amended) Table as in claim [[1]] 18, wherein said first and second mechanisms are connected to each other by means of at least a connection element able to effect the drive of said second mechanism simultaneously to the drive of said first mechanism, so that the lifting and lowering of said service table-top occurs in coordination with the lifting and lowering of said main table-top.
3. (Currently Amended) Table as in claim [[1]] 16, wherein each of said first and second mechanisms comprises at least a pair of oscillating arms parallel to each other, each of said arms being pivoted at a first point to said frame and at a second point to relative means of connection with said main table-top and service table top.
4. (Previously presented) Table as in claim 3, wherein each of said mechanisms comprises two pairs of said arms, the arms of said second mechanism being arranged in the space defined between the arms of said first mechanism.
5. (Previously Presented) Table as in claim 2, wherein said connection element comprises a stiff rod, associated both to one end of an arm of said first mechanism and also to an intermediate point of an arm of said second mechanism.
6. (Previously Presented) Table as in claim 1, wherein at least said first mechanism is connected to said frame by means of elastic thrust and return means able to encourage the lifting and lowering of said main table-top.
